

WOMEN IN STEEL

AMELIA PIERSON

Continuous Improvement Supervisor
Metalex
5 year seniority

What led you to this career path?

I decided to pursue engineering because I felt I had all the right skills and passion to fulfill the role. During my senior year of high school, I joined a robotics team and hit the ground running. I just knew that is what I wanted to do.

What has helped you be successful in the workforce?

Having good mentors within your company and outside. Seek mentors at internships, school, or via networking. Having a professional network that will support you is so helpful.

“Make sure to find men and women mentors to help you get different perspectives.”

Personally, I've found that women mentors can relate more to some of the struggle's men don't normally see mostly because

they can't relate. As a woman, we must think about everything and how that is going to make people see us.

What advice do you have for young women who are looking to pursue a similar career path?

Know your worth. Speak up and let your opinions be heard. Do not be afraid of take command of who you and do what you do. Do not let others tell you what you can or can't do.

“No one questions whether I am the expert or not, they just know I am.”
